

Equity, Quality, and Access: How Do We Create Schools Worth Choosing for All?

A Rich Tapestry of Choices

Choice is widespread

- 18.7 million families have access to public school choice.

A Rich Tapestry of Choices

Most choice options are managed by traditional school districts

- Themed schools, magnets, etc.
- For example, about as many students are in magnets (2.6 million) as in charters (2.7 million)

Under what conditions can choice provide:

- Higher quality public schools?
- More equitable access for all families to high-quality options?
- Greater social, racial, and economic integration?

Open Enrollment Plans

Intradistrict Choice Plans, e.g.

- New York City (small schools)
- Cambridge, MA (controlled choice)

Interdistrict Transfers, e.g.

- Hartford, Boston (desegregation initiatives)
- Minnesota (widespread open enrollment)

Magnets and New Models

Magnet Schools

- Themed schools within and across districts, typically with desegregation goals
- Positive impacts on achievement, motivation, grad rates, parent satisfaction
- But wide variation within and across districts

New Model Schools

- Networks of schools with distinctive approaches
- A number of successful examples
(Success for All, EL, NYC small schools)

Charter Schools

- **Fastest growing sector**
- **Different rules across states**
- **Various management structures**
- **Different management approaches within districts**
- **Outcomes highly variable**

Choice is a means, not an end

- Choice can result in greater or less access for families.
- Depending on rules, choice can foster integration or segregation.
- Choice alone is not enough to produce good options. District efforts to manage choice and improve instruction are key.
- Achievement gains are associated with personalized designs, quality curriculum, and professional staffing and development.

Focus on students, not governance

- Gather data on learning opportunities across subgroups and neighborhoods
- Respond to data and community needs
- Create high-quality learning environments for all

Ensure Equity and Access

- **“Control” choice**
- **Standardize enrollment processes**
- **Backfill for students who leave**
- **Establish common disciplinary systems**
- **Support and incentivize schools to serve the neediest students**

Ensure transparency at every stage

- **Expand and customize communication to parents**
- **Gather common input and outcome data on all schools, regardless of governance**
- **Ensure financial transparency**
- **Create transparent process for student school assignment**

Build a system of schools for all

- Leave no school behind
- Provide common professional development
- Establish common school quality reviews
- Consider wraparound services based on students' needs, not school type
